

Inda-Gro has long been known for our industry leading innovations that deliver peak plant performance while saving energy and water and always in an environmentally responsible manner. It is through our sister organization 151 Farms that we were introduced to a product that we have been using successfully to disinfect our equipment and plants which is environmentally superior to other disinfectants such as bleach or peroxide based disinfectants. That product is 99.9% pure Chlorine Dioxide ClO_2 .

What has historically made the widespread use of ClO_2 difficult to bring to market has been the equipment necessary to create ClO_2 is expensive and once created the lifespan of the chemical requires it to be used within 2 weeks of its creation. Selective Micro Technology (SMT) has solved that problem and the need for expensive commercial ClO_2 generation equipment by instead allowing the end user to create ClO_2 as necessary with their proprietary delivery system which allows the end user to simply add one of their ClO_2 generation packets to regular tap water. Once the packet is added to water, within hours the generator has created the ClO_2 necessary to begin the disinfecting processes.

Inda-Gro is an authorized stocking distributor of the SMT ClO_2 generation products and would be happy to assist you in providing you with these products and learning more about how these products can effectively remove those dangerous pathogens, molds, microbes and viruses that are threatening our health and our plant production capabilities in an environmentally safe and responsible manner.

Our SMT ClO_2 generation packets are non-toxic and environmentally safe. Unlike Sodium Hypochlorite products (bleach) our products are not only more effective (2.5X) at disinfecting surfaces but have been rated and registered by; The Organic Materials Review Institute, EPA, FDA, OMRI, OSHA, as well as many state and local environmental control agencies to be safe and non-toxic when used in the methods and dosing protocols that have established. Furthermore once applied to the surface the product will kill the pathogen, mold or virus and then off-gas so there is no residual measurable evidence of ClO_2 than can be detected.
