

Silo-Pot

Bringing a River to your Roots!

Silo-Pot is a Dual Root Zone Plant Container designed to be used as a single container for commercial cultivation of vegetative thru flowering crops utilizing a constant flow of water over aggregate from a recirculating closed loop aquaponics system thru the entire plant growth cycle.

Fish Water In

Gasketed Seal eliminates evaporative losses and directs all the incoming water into the upper Zone Two ports

Incoming water provides excellent root zone mineralization and water aeration.

Constant Flow Closed Loop Systems increase the overall amount of water within the system and the increase in aggregate minerals also benefits fish health and reproductive rates

Gro-Silo System with 12 plants for a 20 sq-ft area

Silo-Pots stationed in the constant flow Veg Tables showing Sweet Basil and Cannabis. When the Cannabis plants are ready to go into flower they are simply picked up and moved into the Gro-Silo System. There is never any repotting.
